[Appendix A — Keyboard Shortcuts and Power-User Tips](#) [Appendix B — Error Messages Reference](#) [Appendix C — Printing Guide](#)

1. Getting Started

A. What It Does

The login screen is the entry point for the KinderCare admin system. Access is protected by a username and password. All management features are behind authentication — nothing is accessible without a valid session.

B. How to Use It

- 1. Open your browser and navigate to the admin URL (e.g. <http://localhost:5173/admin/login> in development, or your production domain).
- 2. Enter your **Email** and **Password** in the login form.
- 3. Click **Sign In**.
- 4. If your credentials are correct, you are redirected to the Dashboard automatically.
- 5. To log out, click your user avatar or name in the sidebar footer, then click **Logout**.

Security note: The login endpoint is rate-limited to 10 attempts per IP address per minute. If you see a "Too many attempts" error, wait one minute before trying again.

C. Tips for Client Demo

- Log in before the demo starts so you are already on the Dashboard when presenting.
 - The session persists across page refreshes — you do not need to log in again if you reload the page.
 - Dark mode and language preference (EN/BM) are remembered across sessions via the Settings panel. Set these before your demo if you want a specific look.
-

2. Dashboard

A. What It Does

The Dashboard is the first page you see after logging in. It gives a school-wide snapshot without navigating to any individual module. It shows:

- **4 summary stat cards** at the top: total number of active students, total classes, number of students present today, and the overall attendance rate for the current month.
- **Fee Collection Summary card**: shows total fees charged, collected, and outstanding for the current month, plus a count of overdue records.
- **Attendance Trend Chart**: a line chart showing the last 6 months of attendance counts by status (Present, Late, Excused, Absent). Hover for exact numbers.
- **Fee Collection Chart**: a bar chart showing the last 6 months of fees charged vs. collected vs. outstanding. Hover for exact amounts.
- **Today's Attendance panel**: lists the 10 most recently recorded attendance entries for today (student name, class, and status).
- **Today's Birthdays panel**: shows any students whose birthday falls on today's date, with their photo and class name.
- **Monthly Summary panel**: a bar chart showing attendance counts by status (Present, Absent, Late, Excused) across every day of the current month.

B. How to Use It

1. After logging in, the Dashboard loads automatically.
2. The four top stat cards update whenever new data is available. The "Total Students" card counts only active students (not graduated or inactive). The attendance rate reflects the entire current month, not just today.
3. The **Fee Collection Summary** defaults to the current month. It refreshes when you navigate back to the Dashboard.
4. The **Attendance Trend Chart** and **Fee Collection Chart** load the last 6 months of data side by side. On mobile, they stack vertically.
5. The **Today's Birthdays** panel scans all students and highlights anyone whose birth month and day match today. It shows up to the first matching students found from a sample of 100.
6. The **Monthly Summary** bar chart shows one bar per day. Hover over a bar to see exact counts.
7. To act on anything you see, click the sidebar links to navigate to the relevant module.
8. Use the **Command Palette** (**Ctrl+K** or **Cmd+K**) from any admin page to quickly jump to any page or search for students and classes by name.

C. Tips for Client Demo

- Navigate to the Dashboard at the start of every demo — it makes an immediate visual impression with real numbers.
 - If you want the Fee Collection Summary to show non-zero numbers, add at least a few fee records with payments before the demo.
 - Birthday highlights are automatic — if any student's birthday is today, it will appear without any configuration.
 - The stat cards all load in parallel, so the page feels fast even on the first visit.
-

3. Students

A. What It Does

The Students module manages the school's complete student roster. Each student record holds personal details (name, date of birth, gender), class assignment, parent contact information, an optional profile photo, and a status (Active, Graduated, or Inactive). The module supports individual add/edit, photo upload, bulk import from a CSV file, and a detailed student profile page.

B. How to Use It

Viewing and Searching Students

1. Click **Students** in the left sidebar.
2. Students are displayed in a card grid, 12 per page.
3. Use the **Search** bar (top left of the filter row) to search by student name, parent name, or parent email. The search is debounced — wait about 350 ms after typing for results to update.
4. Use the **Class** dropdown to filter by class name.
5. Use the **Gender** dropdown to filter by Male or Female.
6. Use the **Status** dropdown to filter by Active (default), Graduated, or Inactive. The default view shows only active students.
7. When any filter is active, a **Clear Filters** button appears — click it to reset all filters at once.
8. Use the **Previous / Next** pagination buttons to move between pages.

Adding a Student

1. Click the **Add Student** button (top right).
2. Fill in the required fields (marked with *):
 - **Full Name** *
 - **Date of Birth** * (date picker)
 - **Gender** * (Male / Female dropdown)
 - **Class** * (dropdown of existing classes)
 - **Parent Name** *
 - **Parent Email** * (must be a valid email format)
 - **Parent Phone** *
3. Optionally, click the photo upload area to select a profile photo (JPG, PNG, or SVG, max 2 MB). The photo is automatically compressed before uploading.
4. Click **Save**. A success toast appears and the student grid refreshes.

Editing a Student

- 1. Find the student card on the Students page.
- 2. Click the **edit (pencil) icon** on the card.
- 3. The same form opens, pre-filled with the student's current information.
- 4. Make your changes and click **Save**.

Note: If you make changes and then try to close the form without saving, a discard confirmation dialog appears asking whether to keep or discard your unsaved changes.

Deleting a Student

- 1. Click the **trash icon** on the student card.
- 2. A confirmation dialog appears showing the student's name.
- 3. Click **Delete** to confirm, or **Cancel** to go back.
- 4. The card disappears immediately (optimistic deletion). If the server returns an error, the card reappears and an error toast is shown.

Bulk Importing Students from CSV

- 1. Click the **Import CSV** button on the Students page.
- 2. **Step 1 — Upload:** Drag and drop a CSV file into the upload zone, or click to browse. Click **Download Sample CSV** to get a template with the correct column headers.

Required CSV columns (in any order):

Column	Description
full_name	Student's full name
date_of_birth	Format: YYYY-MM-DD
gender	male or female (lowercase)
class_name	Must match an existing class name exactly
parent_name	Parent or guardian name
parent_email	Valid email address
parent_phone	Phone number

- 3. **Step 2 — Preview:** The import modal shows a table of all rows parsed from the file. Invalid rows are highlighted in red with the reason (e.g. "Missing full_name", "Invalid email"). Valid rows show in green. Invalid rows will be skipped — they are not imported.
- 4. Click **Import Valid Rows** to proceed.
- 5. **Step 3 — Result:** A summary shows how many students were imported successfully and lists any rows that failed with their row number and reason.

Viewing a Student Profile

1. Click the student's name or photo on a student card.
2. The Student Profile page opens at `/admin/students/:id`.
3. The profile shows the student's full info card (photo, name, class, parent contacts) and a strip of quick stats (attendance rate, total days present).
4. Below that, an **Attendance Heatmap** shows attendance presence across the past year (green = present, red = absent, gray = no record).
5. The **Portfolio** section shows learning entries grouped by term (T1/T2/T3 tabs). Each entry is tagged by domain (Physical, Cognitive, Language, Social-Emotional, Creative). Click **Add Entry** to create a new portfolio observation. Click **View Report Card** to open the editable report card page for that term.
6. The **Student Artwork** section shows a horizontal scroll of artwork from the Art Wall module for this student.
7. The **Portal Access** card shows the linked parent account (name, email) and a **Manage** button to generate or reset parent portal access codes and PINs.
8. The **Student Timeline** is a unified chronological activity feed aggregating events from 6 data sources: attendance (with streak grouping — e.g. "Present for 5 days"), portfolio entries, artwork, fee payments, report cards, and daily reports. Events are color-coded by type and grouped by month. Click **Load more** to fetch older events (cursor-based infinite scroll).
9. The **Attendance History** table shows individual attendance entries, 15 per page, with date, status, and notes.
10. Click **Edit Student** to open the edit modal from this page.

C. Tips for Client Demo

- Import the sample CSV first to populate the roster quickly before a demo — it takes under 10 seconds to get 20+ students into the system.
- Show the Class and Gender filters together to demonstrate how the system narrows down to specific groups (e.g. "all girls in Class A").
- Click into a student profile and scroll to the heatmap — it is visually striking and immediately communicates the attendance tracking depth.
- Birthday badges appear automatically on any student card whose birthday is today.

4. Classes

A. What It Does

The Classes module manages the school's classrooms. Each class record stores the class name, academic year, assigned teacher, maximum capacity, and status (Active or Graduated). The system automatically shows how many students are currently enrolled in each class, and highlights classes that are at or near full capacity. At the end of an academic year, classes can be graduated in bulk.

B. How to Use It

Viewing Classes

1. Click **Classes** in the sidebar.
2. Classes are shown in a card grid, 9 per page.

3. Each card shows the class name, academic year, teacher name, an enrollment bar (students enrolled vs. capacity), and the student count. Graduated classes show a purple "Graduated" badge and are dimmed.
4. The enrollment bar turns **red** when a class is at 90% or more of its capacity.
5. Use the **Search** bar to filter by class name or teacher name.
6. Use the **Status** dropdown to filter by Active or Graduated classes.

Adding a Class

1. Click **Add Class** (top right).
2. Fill in:
 - **Class Name** * (e.g. "Kelas Bintang")
 - **Academic Year** (e.g. "2026")
 - **Teacher Name** *
 - **Capacity** * (number between 1 and 100; defaults to 25)
3. Click **Save**.

Editing a Class

1. Click the **pencil icon** on a class card.
2. Update the fields as needed.
3. Click **Save**.

Note: Changing the class name does not automatically reassign students — their `class_name` field on each student record still references the old name. Update student records separately if you rename a class.

Graduating a Class

1. Click the **graduation cap icon** on an active class card.
2. The Graduate Class modal opens with a 3-step process:
 - **Step 1 — Select Students:** A list of all students in the class with checkboxes. Use **Select All** / **Deselect All** to manage the list. Checked students will be graduated.
 - **Step 2 — Reassign:** Choose a destination class for any students you did not check (students staying in the system but moving to a different class).
 - **Step 3 — Confirm:** Review and confirm. Checked students are set to "Graduated" status. Unchecked students are moved to the new class. The class itself is marked as Graduated.
3. Graduated classes remain in the system for historical records but are dimmed and filtered out of the default view.

Deleting a Class

1. Click the **trash icon** on the class card.
2. Confirm in the dialog.

C. Tips for Client Demo

- Create 3–5 classes before a demo so the Students, Attendance, and Fee modules have real class options to filter by.
- Fill one class close to capacity to show the red capacity bar — it is an intuitive at-a-glance warning.

- Click into a class from the student profile page (via the class name link) to show it navigates to the class detail if you have that route set up.
-

5. Attendance

A. What It Does

The Attendance module lets staff record daily attendance for all students. It supports four statuses: **Present**, **Absent**, **Late**, and **Excused**. Attendance is recorded per student per day. The same student can be re-marked on the same day (the record is updated, not duplicated). The module also supports:

- Bulk marking all students as Present in one click
- Saving all pending changes in a single server call
- Filtering the view by status tab and by class
- Exporting the day's attendance to CSV
- Printing a blank or filled attendance sheet
- Real-time updates (if another staff member marks attendance on a different device, changes appear automatically)

B. How to Use It

Selecting a Date and Class

1. Click **Attendance** in the sidebar.
2. The page defaults to today's date. Use the **date picker** at the top to switch to a different date.
3. Use the **Class** dropdown (next to the date picker) to filter by a specific class. The default is "All Classes". The class filter scopes the student list, CSV export, and print preview.

Marking Attendance

1. The table shows students (20 per page), filtered by the selected class if any.
2. Each row has four status buttons: **P** (Present), **A** (Absent), **L** (Late), **E** (Excused).
3. Click a button to mark that student with that status. The button highlights to show the selected status.
4. Changes are held locally (not yet saved). The row turns slightly highlighted to indicate unsaved changes.
5. When you have marked all students, click **Save Changes** (appears at the bottom when there are unsaved changes, showing the count of changes pending).

Mark All Present

1. Click the **Mark All Present** button at the top of the table.
2. All students on the current page are marked Present instantly (not saved yet).
3. Click **Save Changes** to commit.

Filtering by Status

- Click a status tab (**All**, **Present**, **Absent**, **Late**, **Excused**) above the table to filter the view. This does not affect what is saved — it only filters what you see.

Exporting to CSV

1. Click **Export CSV** (top right of the page).
2. A CSV file downloads with all attendance records for the currently selected date (up to 1000 rows in one request).

Printing an Attendance Sheet

1. Click **Print Attendance** (top right).
2. A print preview modal opens.
3. Choose **Filled** mode (shows current recorded statuses as checkmarks) or **Blank** mode (empty checkbox cells for manual collection).
4. Click **Print** to send to the printer.

C. Tips for Client Demo

- Start the demo with today's date pre-selected and all students unmarked. Click **Mark All Present** and then **Save Changes** to show how fast bulk marking works.
- Switch to **Absent** tab after saving to show the filter — it will be empty, which nicely demonstrates that everyone was marked present.
- Open the print preview in Blank mode to show the physical paper workflow — useful for schools that collect attendance on paper and enter it later.
- If you have two browser windows open on different accounts, mark a student in one window and show the other window updating in real time.

6. Announcements

A. What It Does

The Announcements module manages notices that appear on the public-facing landing page. Each announcement has a title, body text, category, optional banner image, an optional pinned flag (pinned announcements always appear first), and an optional expiry date (expired announcements are automatically hidden from the public).

Four categories are available: **General**, **Holiday**, **Event**, and **Reminder**. Each has a distinct color badge for quick scanning.

B. How to Use It

Viewing Announcements

1. Click **Announcements** in the sidebar.
2. Announcements are shown in a card grid, 9 per page.
3. Use the **Search** bar to filter by title or body text.
4. Use the **Category** dropdown to filter by category.
5. Pinned announcements show a pin badge. Expired announcements show a red "Expired" badge.

Adding an Announcement

1. Click **Add Announcement** (top right).
2. Fill in:
 - **Title** *
 - **Body** * (free-form text, textarea)
 - **Category** (General / Holiday / Event / Reminder)
 - **Pinned** toggle (yellow when active — pinned announcements appear at the top of the public page)
 - **Expiry Date** (optional — once this date passes, the announcement is automatically hidden from the public landing page; it remains visible in the admin list with an "Expired" badge)
 - **Banner Image** (optional — upload a JPG, PNG, or SVG; displayed at the top of the card on the landing page)
3. Click **Post Announcement**.

Editing an Announcement

1. Click the **pencil icon** on an announcement card.
2. Update as needed and click **Save**.

Deleting an Announcement

1. Click the **trash icon** on the card.
2. Confirm in the dialog.

C. Tips for Client Demo

- Create one pinned General announcement and one Holiday announcement with an expiry date one week from now. This shows the two most common use cases at a glance.
- Open the landing page in a second browser tab and refresh it after posting an announcement — the Notices section appears immediately with the new content.
- Show the expiry date feature by setting it to yesterday — the card still appears in the admin list (with the "Expired" badge) but does not appear on the public landing page, demonstrating automated cleanup.

7. Gallery

A. What It Does

The Gallery module manages photos displayed in the gallery section of the public landing page. Each photo has a caption, a display order number (lower numbers appear first), and a visibility toggle. Hidden photos are stored in the system but not shown to visitors.

B. How to Use It

Viewing Gallery Photos

1. Click **Gallery** in the sidebar.
2. Photos are shown in a card grid, 9 per page, ordered by display order (ascending).

- Each card shows the photo thumbnail, a Visible/Hidden badge overlay, the caption, and the display order number.
- Use the **Search** bar to filter by caption.

Adding a Photo

- Click **Add Photo** (top right).
- Fill in:
 - Photo** * (required — click the upload zone to select a JPG, PNG, or SVG; compressed automatically before upload)
 - Caption** (optional text description)
 - Display Order** (number, default 0 — lower numbers appear first on the landing page)
 - Visible** toggle (green when on — controls whether the photo appears on the public landing page)
- Click **Save**.

Editing a Photo

- Click the **pencil icon** on a gallery card.
- Update the caption, order, or visibility as needed.
- Click **Save**.

Note: Editing a photo record does not re-upload the image file. To replace the photo itself, delete the record and add a new one.

Deleting a Photo

- Click the **trash icon** on the card.
- Confirm in the dialog.

Reordering Photos

- To change the order photos appear on the landing page, edit each photo and update its **Display Order** number. Photos are sorted lowest-to-highest. For example, set your hero photo to order 0 and secondary photos to 1, 2, 3, etc.

C. Tips for Client Demo

- Upload 4–6 real school photos before the demo. Show the gallery grid in the admin panel, then switch to the landing page to show the same photos in the public gallery section.
- Click one of the photos on the landing page to demonstrate the lightbox: it opens fullscreen with a dark background, supports left/right navigation, and shows the caption.
- Toggle one photo to Hidden and refresh the landing page to show it disappears instantly from public view without deleting it.

8. Fees

A. What It Does

KinderCare includes a complete fee collection module covering:

- **Fee Plans** — reusable templates (type, amount, description) that can be bulk-applied to a class or all students
- **Fee Records** — individual charges per student, with support for partial payments, discounts/waivers, and receipt number generation
- **Multiple printable documents** — receipts, invoices, overdue notices, enrollment letters, class collection sheets, monthly reports, annual reports, and per-student fee statements
- **Dashboard integration** — monthly totals appear on the Dashboard at a glance

For detailed testing steps, field-by-field validation rules, and edge-case scenarios, see [docs/fees-module-guide.md](#).

Fee Status Logic

Status is derived automatically in the backend based on payment amounts:

Status	Condition
Waived	Discount amount $\geq$ amount owed
Paid	Amount paid $\geq$ (amount owed - discount)
Partial	Amount paid > 0 but less than net payable
Unpaid	Amount paid = 0

Key Constraints

- **Only Unpaid records can be deleted.** Partial or paid records are permanent (for audit trail purposes).
- **Receipt numbers require configuration** before any payment can be recorded. The format is set in Settings > Document Numbering.
- Payments cannot exceed the remaining balance on a record.

B. How to Use It

Setting Up — Document Numbering (Do This First)

Before recording any payments, configure the receipt number format:

1. Go to **Settings > Document Numbering**.
2. Build the format using segments (see the [Settings section](#) for full details).
3. A common format is: **RCP-** (constant) + Year (auto) + **-** (constant) + Serial (4 digits, reset yearly).
4. Click **Save Format**. The next receipt issued will use this format.

Managing Fee Plans

1. Click **Fee Plans** in the sidebar (or click the **Fee Plans** link from the Fees page).
2. Fee plan cards show the name, type, and amount.
3. Click **Add Fee Plan** to create a template:
 - **Name ***

- **Type** * (Tuition / Activity / Uniform / Registration / Other)
 - **Amount** * (positive number)
 - **Description** (optional)
4. To generate fee records from a plan, click the **lightning bolt (Use Plan)** icon on any plan card.

Generating Fee Records in Bulk

1. From the Fee Plans page or the Fees page, click **Generate Fees** (blue button).
2. **Step 1 — Fee Details:** Toggle between "Use Fee Plan" (select an existing plan) or "Custom Fee" (enter type, amount, and description manually).
3. **Step 2 — Target:** Select the target class (or "All Students") and set an optional due date.
4. **Step 3 — Confirm:** Review the summary. It shows how many students will receive a new fee record. Click **Generate** to create all records at once.
5. A toast confirms how many records were created.

Adding a Single Fee Record

1. On the **Fees** page, click **Add Fee Record** (orange button, top right).
2. Select the **Student** from the dropdown (searches up to 500 students).
3. Fill in:
 - **Type** * (Tuition / Activity / Uniform / Registration / Other)
 - **Description** *
 - **Amount Owed** *
 - **Discount Amount** (default 0)
 - **Discount Reason** (appears when discount > 0)
 - **Due Date** (optional)
4. Click **Save**.

Recording a Payment

1. On the Fees table, find the fee record and click **Pay** (the green button in the row actions).
2. The payment modal shows:
 - Student name and fee description
 - Balance breakdown (owed, discount if any, previously paid if any, remaining balance)
 - A payment amount field pre-filled with the full remaining balance
3. Adjust the amount if the parent is making a partial payment.
4. Click **Record Payment**.
5. A receipt is automatically generated and the Receipt View opens for printing.

Note: If document numbering is not configured, the **Record Payment** button is disabled and an amber warning is shown. Configure the receipt format in Settings first.

Filtering Fee Records

The Fees table supports four simultaneous filters:

- **Search** — searches by student name
- **Status** — All / Unpaid / Partial / Paid / Waived

- **Month** — filters by the fee's associated month (from the due date)
- **Class** — filters by the student's class

Printing Documents from a Fee Record

Each row in the Fees table has an actions menu (three-dot or icon buttons). Available print documents:

Action	Document	Best used for
Print Receipt	Printable payment receipt	After recording a payment
Print Invoice	Formal fee invoice	Billing parents proactively
Print Overdue Notice	Invoice variant with days overdue + principal signature	Chasing unpaid accounts
Print Enrollment Letter	Formal enrollment confirmation letter	Registration fee + paid status

Class Collection Sheet

1. Click **Print Collection Sheet** (top of Fees page).
2. Select a **Class** and a **Month**.
3. A printable table appears listing every student in the class and their fee records for that month, with blank "Collected" checkboxes and a Remarks column.
4. Click **Print**.
5. Includes "Prepared By" and "Verified By" signature blocks.

Monthly Collection Report

1. Click **Monthly Report** (top of Fees page).
2. Select a **Month**.
3. The report shows four summary stat boxes, a breakdown by class, a breakdown by fee type, and a list of outstanding accounts.
4. Click **Print**. This report prints in A4 landscape format.

Annual Report

1. Click **Annual Report** link (top of Fees page) or navigate to </admin/fees/annual-report>.
2. Select a **Year** from the dropdown.
3. The report shows a four-stat summary strip, a by-fee-type table with totals, the collection rate percentage (color-coded: green >= 90%, amber >= 70%, red below 70%), and a record count summary.
4. Click **Print Annual Report**.

Fee Statement (Per Student)

1. From a student's fee record row, there is a Statement link. Or navigate directly to </admin/fees/statement/:studentId>.
2. Select a **Year**.
3. Toggle **Ledger View** to switch between a standard fee list and a running-balance ledger format.

4. Click **Print Statement**.

5. The statement footer includes an LHDN (Malaysian income tax) note about child education tax relief eligibility.

C. Tips for Client Demo

- Generate fees for a whole class in one action to show the bulk power — 20 students get records in under 3 seconds.
- Record a partial payment on one record, then show the status changing from Unpaid to Partial. Then record the remaining balance and show it flip to Paid.
- Print a receipt immediately after recording payment — school logo, receipt number, and full breakdown appear.
- Open the Monthly Report and Annual Report to show the financial overview depth.
- The Collection Rate percentage on the Annual Report is color-coded — this is a strong visual for parents' meeting presentations.

9. Settings

A. What It Does

Settings is split into three sections accessible from a sidebar nav on desktop (or a drill-down list on mobile):

- **School Info** — configures the school's name, address, contact details, social media links, operating hours, and logo. This information is shown on all printed documents.
- **Document Numbering** — configures the format of receipt numbers using a visual segment builder.
- **Appearance** — toggles dark mode and switches the interface language between English (EN) and Bahasa Malaysia (BM).

B. How to Use It

School Info

1. Go to **Settings > School Info**.
2. Fill in any of the following fields:
 - **Logo** — click the upload square to select a photo (max 2 MB; resized automatically to max 400 px)
 - **School Name** — appears on all printed documents (receipts, reports, statements)
 - **Address** — multi-line; appears on printed documents below the school name
 - **Phone** — contact number
 - **Email** — contact email
 - **Principal Name** — used on overdue notices and enrollment letters
 - **Registration Number** — appears on invoices, overdue notices, enrollment letters, annual report, and class collection sheet
 - **WhatsApp Number** — digits only, 7–15 characters
 - **Operating Hours** — a grid showing each day of the week with Open and Close time pickers. Days with no times entered show "Closed".
 - **Google Maps Embed URL** — paste the URL from Google Maps > Share > Embed a map (must start with <https://www.google.com/maps/embed?>)

- **Facebook URL** — full URL to the school's Facebook page
 - **Instagram URL** — full URL to the school's Instagram profile
3. Click **Save** when done. A success toast confirms the save.

Important: The **Save** button is disabled until you make at least one change. It will not activate until the form is "dirty" (has unsaved changes).

Document Numbering

1. Go to **Settings > Document Numbering**.
2. The format is built from a list of **segments**. Each segment is one part of the number.
3. Add segments using the **Add Segment** button. Available segment types:

Type	Description	Example output
Constant	Fixed text you type	RCP-
Year	Current year (auto)	2026
Month	Current month (auto, 2 digits)	03
Serial	Auto-incrementing number, zero-padded	0001

4. For a **Serial** segment, configure:
 - **Total characters** (1–20) — how many digits, zero-padded (e.g. 4 = 0001)
 - **Reset by** — No Reset (runs continuously), Monthly (resets to 1 on the first of each month), or Yearly (resets to 1 on 1 January)
 - **Start from** — the starting serial number (default 1)
5. The **live preview** (orange box) shows what the next number will look like based on your segments.
6. Only one Serial segment is allowed per format (the Add Segment button is disabled when the last segment is already a serial).
7. Click **Save Format**.

Warning: If you change the format after receipts have already been issued, a confirmation dialog appears warning that the format change will affect the visual appearance of future numbers (the existing serial counter is preserved).

Recommended receipt format for a typical school:

RCP- (constant) + 2026 (year) + - (constant) + 0001 (serial, 4 chars, reset yearly)

Produces: RCP-2026-0001, RCP-2026-0002, etc.

Appearance

1. Go to **Settings > Appearance**.

2. **Dark Mode** — toggle the pill switch. When active (orange), the entire admin interface switches to dark theme. This setting is saved to your browser and restores automatically on next visit.
3. **Language** — click **EN** or **BM** to switch all interface labels between English and Bahasa Malaysia. This setting is also saved to your browser.

C. Tips for Client Demo

- Fill in the School Info completely before any demo — the school name and logo appear on every printed document. A demo that says "KinderCare" on receipts instead of the actual school name is less convincing.
 - Build the receipt format live during the demo: add a Constant segment, type **RCP-**, add a Year segment, add another Constant **-**, then add a Serial segment. The preview updates in real time as each segment is added.
 - Toggle dark mode live to show the UI adapts instantly with no page reload.
 - Switch language to BM and show that all menu labels and form labels change — strong localisation proof for Malaysian schools.
-

10. Landing Page (Public Site)

A. What It Does

The landing page is a public-facing marketing page for the school. It is separate from the admin panel and requires no login to view. It pulls real data from the system:

- **Hero section** — animated bear mascot, stat counters, and a call-to-action
- **Features section** — 5 feature cards highlighting what the school offers
- **Gallery section** — shows published (visible) gallery photos with a lightbox viewer (keyboard navigation: arrow keys and Escape)
- **Art Wall section** — "Our Little Artists" cork board showing student artwork with a "Show More" / "Show Less" toggle
- **Notices section** — shows active (non-expired) announcements with category-colored badges
- **Testimonials section** — shows a carousel of visible parent testimonials (auto-advances every 4 seconds, pauses on hover)
- **Inquiry Form** — a public enrollment enquiry form where prospective parents can submit their details and a message. Rate-limited to 5 submissions per IP per 10 minutes.
- **Location section** — Google Maps embed (if configured), contact info grid, and operating hours
- **Stats section** — shows animated counters (students enrolled, classes, years established, attendance rate)
- **WhatsApp button** — a fixed button in the bottom-left corner linking to the school's WhatsApp number (only appears if configured in Settings > School Info)

The landing page also includes dark mode and language toggles in the navbar — the same settings used in the admin panel.

B. How to Use It

The landing page is accessed by anyone who visits the school's public URL. There is no admin action required beyond keeping the content modules (Gallery, Art Wall, Announcements, Testimonials) up to date in the

admin panel. The Inquiry Form and Location section are automatic once School Info is configured.

Navigation anchors on the landing page:

- **About** — scrolls to the Features section
- **Programs** — scrolls to the Programs section
- **Gallery** — scrolls to the gallery section
- **Notices** — scrolls to the announcements section
- **Contact** — scrolls to the contact/CTA section

A **scroll-to-top button** appears in the bottom-right corner after scrolling down 320 px.

The **Admin Login** link in the navbar (lock icon on mobile, "Admin Login" pill on desktop) takes staff to the login page.

C. Tips for Client Demo

- Keep the admin panel open in one browser tab and the landing page open in another. Add an announcement in the admin panel, then refresh the landing page to show it appearing instantly.
- Click a gallery photo to demonstrate the lightbox — it is a polished, app-quality interaction. Use arrow keys to navigate and Escape to close.
- Scroll through all sections smoothly to show the layout: hero with animated bear mascot, stats with counting animation, features, gallery, art wall, notices, testimonials carousel, inquiry form, location map, and footer.
- The testimonials carousel auto-advances every 4 seconds and pauses when hovered — point this out during the demo.
- Submit a test inquiry on the landing page, then switch to the admin panel and open the Inquiries page to show it appearing in real time.
- If the school has a WhatsApp number configured, show the fixed WhatsApp button in the bottom-left corner — it opens a chat directly with the school.

11. Testimonials

A. What It Does

The Testimonials module manages parent quotes displayed on the landing page in a rotating carousel. Each testimonial has the parent's name, an optional role (e.g. "Parent of Year 1"), the quote text, an optional avatar photo, a display order number, and a visibility toggle.

B. How to Use It

Viewing Testimonials

1. Click **Testimonials** in the sidebar.
2. Testimonials are shown in a card grid, 9 per page.
3. Each card shows the avatar (photo or initials circle), parent name, role, quote, and a Visible/Hidden badge.
4. Use the **Search** bar to filter by name or quote text.

Adding a Testimonial

1. Click **Add Testimonial** (top right).
2. Fill in:
 - **Parent Name** *
 - **Role** (optional — e.g. "Parent of Aishah, Year 1")
 - **Quote** * (the testimonial text)
 - **Display Order** (number — lower numbers appear earlier in the carousel)
 - **Visible** toggle (green when on — controls whether this testimonial appears on the landing page)
 - **Avatar Photo** (optional — JPG/PNG, max 2 MB; if not uploaded, the carousel shows the parent's initials in a colored circle)
3. Click **Save**.

Editing or Deleting a Testimonial

1. Click the **pencil icon** to edit or the **trash icon** to delete.
2. Deletion requires confirmation in a dialog.

C. Tips for Client Demo

- Add 3–4 testimonials with different display orders and make them all visible.
- Scroll to the testimonials section on the landing page and let it auto-advance to show the stacked carousel animation.
- Show the initials fallback by adding a testimonial without a photo — the system generates an initial badge automatically.
- Toggle a testimonial's visibility off in the admin, then refresh the landing page to show it disappears from the carousel immediately.

12. Art Wall

A. What It Does

The Art Wall is a cork board-style page for displaying student artwork. Each artwork entry includes a photo, optional caption, the student's name, date, display order, and a visibility toggle. Artwork is shown on the admin page, on the student's profile, and in the "Our Little Artists" section of the public landing page. The student name is stored independently — artwork persists even if the student is later deleted or graduated.

B. How to Use It

Viewing the Art Wall

1. Click **Art Wall** in the sidebar (under the Content group).
2. Artworks are displayed in a cork board grid (2 columns on mobile, 4 on desktop), 12 per page.
3. Each card has a polaroid-style frame with a pushpin and slight random rotation for a realistic cork board feel.
4. Use the **Search** bar to filter by caption.
5. Click a card to open a lightbox viewer (supports keyboard navigation: arrow keys and Escape).

Adding Artwork

1. Click **Add Artwork** (orange button, top right).
2. Fill in:
 - **Photo** * (required — upload a JPG or PNG; compressed automatically)
 - **Student** * (select from dropdown)
 - **Caption** (optional)
 - **Date** (artwork date)
 - **Display Order** (lower numbers appear first)
 - **Visible** toggle (controls whether this artwork appears on the public landing page)
3. Click **Save**.

Editing or Deleting Artwork

1. Click the **pencil icon** on a card to edit, or the **trash icon** to delete.
2. Deletion requires confirmation. Deleted artwork is removed from both the admin view and the landing page.

C. Tips for Client Demo

- Upload 4–6 student artworks before the demo. The cork board with pushpins and rotated cards is visually distinctive and immediately communicates a child-friendly aesthetic.
- Show the landing page "Our Little Artists" section — it pulls visible artwork automatically.
- Click a student name on the Art Wall to navigate to their profile, where artwork also appears in a mini gallery.

13. Daily Reports

A. What It Does

The Daily Reports module provides per-student daily activity tracking. Staff can record each student's meals, nap duration, toilet count, mood, and an activity note for any given day. Reports are viewable by parents through the Parent Portal.

B. How to Use It

Viewing and Filling in Reports

1. Click **Daily Reports** in the sidebar (under the Daily group).
2. The page defaults to today's date. Use the **date picker** to switch to a different date.
3. Use the **Class** dropdown to filter students by class (default: "All Classes").
4. The table shows students with inline editable fields per row:
 - **Mood** — 4-button picker: Happy, Okay, Tired, Upset (click one to select)
 - **Meals Eaten** — dropdown: All / Most / Some / None (hidden on small screens)
 - **Nap Minutes** — number input, 0–480 (hidden on small screens)
 - **Toilet Count** — number input, 0–30 (hidden on small screens)
 - **Activity Note** — free-text input
5. Rows with unsaved changes are highlighted in orange.

6. Click **Save All** (green button, bottom) to save all pending changes at once. The button shows the count of unsaved changes.

Deleting a Report

- Reports can be cleared by saving empty values. The backend supports soft-delete for individual entries.

C. Tips for Client Demo

- Fill in a few students' daily reports with different moods and activity notes. The mood icons (happy face, tired face, etc.) are visually intuitive.
- Show the Parent Portal Daily Reports tab afterwards — parents see exactly what staff entered for their child.
- Demonstrate the class filter to show how a teacher can focus on just their class.

14. Portfolio

A. What It Does

The Portfolio module tracks student learning observations aligned with KSPK curriculum domains. Teachers create portfolio entries tagged to one of five developmental domains (Physical, Cognitive, Language, Social-Emotional, Creative), grouped by term (Term 1 / Term 2 / Term 3). Each term can have a report card with teacher and principal comments, downloadable as a PDF.

B. How to Use It

Adding Portfolio Entries

1. Navigate to a student's profile page (click a student card on the Students page).
2. Scroll to the **Portfolio** section.
3. Click the **Term tab** (T1, T2, or T3) for the relevant term.
4. Click **Add Entry** (purple button).
5. Fill in:
 - **Domain** * (Physical / Cognitive / Language / Social-Emotional / Creative)
 - **Observation** * (free-text description of what the student did or achieved)
 - **Photo** (optional — upload evidence)
 - **Date** (entry date)
6. Click **Save**. The entry appears under the matching domain heading.

Editing or Deleting an Entry

1. Click an existing entry to open the edit modal.
2. Update fields and click **Save**, or delete the entry from the modal.

Viewing and Editing the Report Card

1. From the student profile Portfolio section, click **View Report Card** for a specific term.
2. The Report Card page (</admin/students/:id/portfolio/:term>) opens.

3. The page shows domain sections (collapsible) with all entries grouped under each domain.
4. At the bottom, enter the **Teacher Comment** and **Principal Comment** in the text areas. Comments **auto-save on blur** (when you click outside the field).
5. Click **Download PDF** (top right) to download the report card as a formatted PDF file. The filename follows the format: **report-[student-name]-[term].pdf**.

C. Tips for Client Demo

- Add 2–3 portfolio entries across different domains for one student, then open the Report Card page to show the grouped layout.
 - Type a teacher comment and click outside the field — show the auto-save toast appearing.
 - Click **Download PDF** to demonstrate the polished report card output with the school logo and branding.
 - Parents can view portfolio entries and the report card through the Parent Portal — show both sides during the demo.
-

15. Inquiries

A. What It Does

The Inquiries module handles enrollment enquiries submitted through the public landing page. Prospective parents fill in a form with their name, child's name, child's age, phone number, and a message. These submissions appear in the admin panel as tickets with a status workflow: **New** → **Contacted** → **Enrolled** or **Closed**.

B. How to Use It

Viewing Inquiries

1. Click **Inquiries** in the sidebar.
2. Inquiries are shown in a table, 20 per page.
3. Use the **status tabs** at the top to filter: All / New / Contacted / Enrolled / Closed.
4. Use the **Search** bar to search by parent name or child name.
5. Use the **date range filters** (From / To) to narrow by submission date.
6. When filters are active, a **Clear Filters** button appears.

Updating Inquiry Status

1. Each row has a **Status** dropdown. Click it to change the status directly from the table row.
2. The status updates immediately.

Contacting a Parent via WhatsApp

- Each row shows a **WhatsApp icon** next to the phone number. Click it to open a WhatsApp chat with the parent's number pre-filled.

C. Tips for Client Demo

- Submit a test inquiry on the landing page first, then open the Inquiries page to show it appears in real time with "New" status.
 - Change the status from New to Contacted to Enrolled to demonstrate the workflow.
 - Click the WhatsApp icon to show the deep-link to WhatsApp — this is a strong selling point for Malaysian schools where WhatsApp is the primary communication channel.
-

16. Parent Portal

A. What It Does

The Parent Portal is a separate, parent-facing interface where parents can view their child's information. It uses its own authentication system (Access Code + 6-digit PIN) — separate from the admin login. One parent account can be linked to multiple children. The portal provides read-only access to:

- Today's attendance status and recent attendance history
- Outstanding fees and payment history
- School announcements
- Daily activity reports (meals, nap, mood, notes)
- Portfolio entries and report cards

B. How to Use It

Setting Up Portal Access (Admin Side)

1. Navigate to a student's profile page.
2. Scroll to the **Portal Access** card.
3. Click **Manage** to open the portal access modal.
4. Click **Generate Access Code** to create a unique alphanumeric code for the parent.
5. Set a **6-digit PIN** for the parent.
6. Copy the access code and PIN and share them with the parent (e.g. print or message via WhatsApp).

Parent Login

1. Parents navigate to </portal/login>.
2. Enter the **Access Code** and **6-digit PIN** provided by the school.
3. Click **Sign In**. On success, the parent is taken to the Portal Dashboard.

Portal Navigation

The portal has 6 tabs (bottom navigation on mobile, sidebar on desktop):

1. **Dashboard** — greeting with child's photo, today's attendance status, unpaid fees count, latest daily report summary, and recent announcements.
2. **Attendance** — last 5 attendance records with status badges and dates.
3. **Fees** — list of unpaid and partially paid fee records with amounts.
4. **Announcements** — latest school notices with category badges.
5. **Daily Reports** — most recent daily report showing mood, meals, nap, toilet, and activity note.
6. **Portfolio** — term-grouped portfolio entries by domain, with a link to view the report card.

Child Switcher

- If a parent has multiple children linked to their account, a **child switcher** dropdown appears at the top of the portal. Click the child's name/photo to switch between children. All portal data updates to reflect the selected child.

Portal Settings

- A **gear icon** (top right) opens a settings menu with dark mode toggle, language toggle (EN/BM), and device management.

C. Tips for Client Demo

- Generate portal access for a student from the admin side first. Then open the portal login in a separate browser or incognito window.
- Log in as the parent and scroll through each tab to show the parent's perspective of their child's school day.
- Show the child switcher by linking two students to the same parent account.
- Demonstrate that the portal is read-only — parents can view but not modify any data.
- Enter a daily report in the admin (Daily Reports page), then refresh the parent portal to show it appearing immediately.

Appendix A — Keyboard Shortcuts and Power-User Tips

Navigation

Action	Method
Command Palette (quick jump)	Ctrl+K / Cmd+K — search pages, students, and classes by name
Jump to any admin page	Click the page name in the left sidebar
Toggle sidebar on mobile	Tap the hamburger (menu) icon in the top bar
Scroll to top of landing page	Click the scroll-to-top button (bottom-right, appears after scrolling 320 px)

The sidebar groups pages into sections: **People** (Students, Classes, Parents), **Daily** (Attendance, Daily Reports), **Finance** (Fees), and **Content** (Announcements, Gallery, Art Wall, Testimonials). Inquiries and Settings sit at the bottom.

Command Palette

- Press **Ctrl+K** (Windows) or **Cmd+K** (Mac) from any admin page to open the command palette.
- Type 2+ characters to search. Results are grouped into **Pages** (all 13 admin pages), **Students** (top 5 matches by name, shows class), and **Classes** (top 5 matches, shows teacher).
- Navigate with arrow keys, press Enter to go, or press Escape to close.
- The search input is debounced (200 ms).

Attendance

- **Mark all present quickly:** Click **Mark All Present** then immediately click **Save Changes** — the entire class is recorded in two clicks.
- **Fix a wrong status:** Click a different status button on the same row. The pending change is updated in place. The previous status is not saved until you click Save Changes.
- **Use the status filter tabs** to quickly count how many students are absent on a given day without leaving the page.

Students

- **Bulk import saves the most time** when onboarding a new school year. Prepare the CSV in Excel or Google Sheets, download the sample CSV from the import modal to get the correct column names, then import.
- **Search works across student name, parent name, and parent email** — you can find a student by searching the parent's name even if you cannot remember the child's full name.
- **Class filter + Gender filter** can be combined: for example, "Girls in Kelas Bintang" uses both dropdowns simultaneously.

Fees

- **Configure Document Numbering before anything else** — the Record Payment button is disabled until a receipt format is saved.
- **Generate Fees in bulk** at the start of each month: select the tuition plan, target "All Students", set the due date, and confirm. All records are created in one action.
- **Export CSV** on the Fees page exports all records matching the current filters. Apply the Month filter first to export only a specific month.
- **The Collection Rate** on the Annual Report is color-coded: green (90%+), amber (70–89%), red (below 70%) — useful for board reporting.

Printing

- All print dialogs open the browser's native print dialog (**Ctrl+P** / **Cmd+P** also works once the print view is open).
- Set paper size to **A4 Portrait** for most documents. The **Monthly Collection Report** is the exception — set it to **A4 Landscape**.
- Print CSS hides all browser UI, sidebar, and toolbar — only the document content is printed.

Settings

- **Dark mode toggle** and **language toggle** are also accessible from the sidebar footer panel (click the chevron above your user name to expand the panel) — you do not need to navigate to the Settings page to switch them.
- Changes to School Info are reflected on all newly printed documents immediately after saving. Already-printed documents are not affected.

Appendix B — Error Messages Reference

Message	What it means	What to do
"Too many attempts. Please try again later."	Login rate limit reached (10 attempts/IP/minute)	Wait 60 seconds, then try again
"Invalid email or password."	Login credentials are incorrect	Check email and password; reset password via Supabase dashboard if needed
"Failed to save school info. Please try again."	Server error when saving Settings > School Info	Check your internet connection and try again
"Logo upload failed. Please try again."	Image upload to Supabase Storage failed	Check that the school-logo storage bucket exists and is public; check file is under 2 MB
"Fee record created" / "Fee record updated" (toast)	Success confirmation	No action needed
"Failed to save. Please try again." (fees)	Server error on fee record create/update	Retry; check backend logs if the problem persists
"Failed to remove. Please try again."	Optimistic delete was rolled back after a server error	The item reappears; check backend and retry
"Receipt numbering not configured" (amber box in payment modal)	No document numbering format has been saved	Go to Settings > Document Numbering and save a receipt format
"Payment cannot exceed remaining balance."	Amount entered in the payment modal is too high	Enter an amount less than or equal to the remaining balance shown
"Only unpaid fee records can be deleted."	Attempting to delete a Partial or Paid fee record	You cannot delete paid records. Apply a waiver (full discount) if the record needs to be zeroed out
"Failed to generate fees."	Bulk fee generation failed	Check that the selected plan exists and the target class has students; retry
"Failed to export CSV."	CSV export request failed	Retry; if the problem persists, apply filters to narrow the dataset and try again
"Student not found."	The requested student profile URL does not exist	Check the student ID in the URL; navigate back to Students and click the correct card
"Logo upload failed" (student/gallery/announcement)	Image upload failed	Check that the relevant storage bucket exists and is public (student-photos , gallery-photos , announcement-banners)

Message	What it means	What to do
"Too many submissions. Please try again later." (inquiry form)	Inquiry rate limit reached (5/IP/10 min)	Wait 10 minutes, then try again
"Invalid access code or PIN." (parent portal)	Portal login credentials are incorrect	Check the access code and PIN; contact the school admin to regenerate if needed
"Too many login attempts." (parent portal)	Portal login rate limit reached	Wait and try again later
"Device limit reached." (parent portal)	Too many devices logged in for this parent account	Log out from another device, or ask the admin to revoke a session

Appendix C — Printing Guide

All print documents use browser-native printing (`window.print()`). No PDF software or third-party printer drivers are required.

Print Documents Overview

Document	Accessed from	Paper size	Orientation
Payment Receipt	Fees table row > Print Receipt (or auto-opens after payment)	A4	Portrait
Fee Invoice	Fees table row > Print Invoice	A4	Portrait
Overdue Notice	Fees table row > Print Overdue Notice	A4	Portrait
Enrollment Letter	Fees table row > Print Enrollment Letter	A4	Portrait
Class Collection Sheet	Fees page > Print Collection Sheet	A4	Portrait
Monthly Collection Report	Fees page > Monthly Report > Print	A4	Landscape
Annual Report	Fees page > Annual Report > Print Annual Report	A4	Portrait
Fee Statement	/admin/fees/statement/:studentId > Print Statement	A4	Portrait
Attendance Sheet (Filled)	Attendance page > Print Attendance > Filled	A4	Portrait
Attendance Sheet (Blank)	Attendance page > Print Attendance > Blank	A4	Portrait

Document	Accessed from	Paper size	Orientation
Portfolio Report Card	Student profile > Portfolio > View Report Card > Download PDF	A4	Portrait

Before Printing

1. Ensure **School Info** is fully configured in Settings (school name, address, logo, registration number, principal name). These fields populate the header of every document.
2. Ensure the browser is not set to print headers/footers (browser URL and date are sometimes added by default). In Chrome: Print > More Settings > uncheck "Headers and footers".
3. Set **Margins** to "Default" or "Minimum" in the browser print dialog for best layout.

How to Print Each Document

Payment Receipt:

1. Record a payment on a fee record. The receipt view opens automatically.
2. Alternatively, click **Print Receipt** from the row actions menu on any fully or partially paid record.
3. Click the **Print** button in the receipt view toolbar.
4. The print dialog opens. Confirm A4 Portrait and click Print.

Fee Invoice:

1. Click **Print Invoice** from the row actions menu on any fee record.
2. The invoice opens in a modal overlay.
3. Click **Print** in the modal toolbar.

Overdue Notice:

1. Click **Print Overdue Notice** from the row actions menu.
2. The notice shows days overdue (highlighted in red) and includes a principal signature block.
3. Click **Print**.

Enrollment Letter:

1. Click **Print Enrollment Letter** from the row actions menu.
2. Only meaningful for Registration-type fee records with Paid status.
3. Click **Print**.

Class Collection Sheet:

1. Click **Print Collection Sheet** at the top of the Fees page.
2. Select the class and month in the toolbar.
3. Review the sheet (students are grouped with fee rows, each with a blank Collected checkbox).
4. Click **Print**.

Monthly Collection Report:

1. Click **Monthly Report** at the top of the Fees page.

- 2. Select the month in the toolbar.
- 3. Click **Print** in the modal toolbar.
- 4. Set orientation to **Landscape** in the print dialog.

Annual Report:

- 1. Navigate to **Annual Report** (link at the top of the Fees page, or </admin/fees/annual-report>).
- 2. Select the year.
- 3. Click **Print Annual Report**.

Fee Statement (for parent/LHDN):

- 1. Navigate to the student's fee statement page (</admin/fees/statement/:studentId>).
- 2. Select the year.
- 3. Optionally toggle **Ledger View** for a running-balance format.
- 4. Click **Print Statement**.
- 5. The footer includes an LHDN note about child education tax relief under the Malaysian Income Tax Act.

Attendance Sheet:

- 1. On the Attendance page, select the date (and optionally filter by class using the class filter on the page).
- 2. Click **Print Attendance**.
- 3. Choose **Filled** (current statuses) or **Blank** (empty checkboxes for manual collection).
- 4. Click **Print**.

Portfolio Report Card (PDF Download):

- 1. Navigate to a student's profile > Portfolio section > click **View Report Card** for the desired term.
- 2. On the Report Card page, click **Download PDF** (top right).
- 3. The PDF downloads directly as [report-\[student-name\]-\[term\].pdf](#) — no print dialog is needed.
The PDF is generated client-side using [@react-pdf/renderer](#).
- 4. Open the downloaded PDF and print from your PDF viewer if a physical copy is needed.

Print Troubleshooting

Problem	Solution
School logo does not appear on printout	Ensure the logo is saved in Settings > School Info and the school-logo Supabase bucket is public
School name shows as "KinderCare" instead of the actual school name	Enter the school name in Settings > School Info and save
Print includes browser UI (address bar, tabs)	The print CSS hides non-document content — if UI still shows, use the browser's "Print to PDF" function and check your browser's print settings
Monthly Report is cut off on right edge	Set orientation to Landscape in the print dialog

Problem	Solution
Blank page appears after the document	Set margins to "Minimum" or "None" in the print dialog
Receipt number shows as "RCP-0000" or similar test value	This is from a test receipt format. Reconfigure Document Numbering in Settings with your real prefix and reset the serial
